

CHINA SUPPLIER REALITY CHECK

Supplier Verification Report — Desktop Reality Check (Registry & Public-Record Based)

SAMPLE REPORT — prepared for service demonstration. All data below is real public registry data.

Subject company	Jiangsu CETC Innovation Environment Technology Co., Ltd. (江苏中电创新环境科技有限公司)
Report ID / date	SAMPLE-2026-1022 · 22 October 2026
Check type	Desktop verification — business registry, ownership, tender track record, risk screening
Turnaround (paid service)	2 business days

VERDICT: VERIFIED — LEGITIMATE OPERATING COMPANY · LOW RISK

The subject is a real, actively operating engineering company — not a shell, trader front, or dissolved entity. It is a wholly owned subsidiary of a Chinese state-owned research institute, holds RMB 72 million paid-in registered capital, and has won hundreds of public tenders, including multiple semiconductor ultrapure-water and wastewater packages in 2026. Suitable to proceed to commercial negotiation under normal contract terms.

1 · Legal Identity

- **Unified Social Credit Code:** 913202133140424571
- **Legal representative:** Tian Yuming (田宇鸣)
- **Established:** 28 October 2014 — over 11 years in operation
- **Registered capital:** RMB 72,000,000, fully paid in
- **Registered address:** No. 88 Juqu Road, Xinwu District, Wuxi, Jiangsu Province, China
- **Registration status:** In good standing; no abnormal-operation, deregistration or licence-revocation flags in the registry data reviewed

2 · Ownership & Control

100% owned by the 2nd Research Institute of CETC (China Electronics Technology Group Corporation), a central state-owned enterprise. Ultimate controller: the State-owned Assets Supervision and Administration Commission (SASAC) of the State Council. State ownership at this level makes disappearance/insolvency risk negligible for ordinary contract values, but procurement runs through formal group channels — expect tender procedures and longer decision cycles rather than quick private negotiation.

3 · Business Scope & Real Operating Activity

Registered scope covers environmental-engineering design, construction and equipment integration — consistent with what the company advertises (industrial water treatment, ultrapure water and wastewater systems for semiconductor fabs). Public tender records independently confirm real, current activity at scale:

- **Volume:** 428 tender/bidding records on file, 248 of them in 2026 alone — a level of activity a shell company cannot fabricate.
- **Recent wins:** Multiple semiconductor water packages (ultrapure water + wastewater) for fab projects in Wuxi, Chengdu and Hefei, several awarded in the last 60 days.
- **Pattern:** A significant share of awards are group-internal directed procurements issued via the CETC group supply-chain platform — normal for SOE subsidiaries, and a useful signal of where its order flow comes from.

4 • Risk Screening

- **Registry blacklists:** No matches indicating a dissolved, revoked or blacklisted entity in the data reviewed.
- **Litigation / enforcement:** No adverse findings surfaced in this desktop screening. (Paid reports list every litigation and enforcement record individually, with case numbers.)
- **Name / licence integrity:** Registered name matches the contracting entity exactly — no borrowed-licence or name-clone indicators.
- **Payment-risk view:** Low. SOE parent, paid-in capital verified, continuous verifiable trading history since 2014.

5 • Verified Public Contacts

Switchboard numbers appearing in official registry and tender documents include +86 510-81180016 and +86 510-81180116 (Wuxi HQ). Paid reports verify the named contact person for your specific deal and cross-check the phone/email against at least two independent public sources before you rely on them.

6 • Recommendation

PROCEED. This supplier is genuine and operating at scale. For a first order, standard protections are sufficient: contract in the exact registered name above, milestone payments tied to delivery/acceptance, and payment only to a corporate account in the same registered name. No enhanced measures (escrow, on-site audit) are indicated by anything found in this check — unless your order value is large enough to justify an on-site visit on general principles.

Methodology, Sources & Limits

Compiled 22 October 2026 from Chinese business-registry data (RiskBird commercial registry mirror), official tender/bidding disclosures and the CETC group e-procurement platform. Every factual line in a paid report is traceable to a named public source; anything that cannot be confirmed is labelled "unverified" rather than guessed. A Desktop Reality Check does not include a site visit, factory photography or interviews — those are available in the Deep Dive tier. This sample is provided to demonstrate format and depth; it is not investment or legal advice.
